

I-FLUX 200

PROFESSIONAL DIESEL INTAKE AND EGR CLEANER

DESCRIPTION

I-FLUX 200 fluid is created especially as the only chemical to perform effective and safe cleaning upon treatment with the I-FLUX 200 device – a professional unit for intensive cleaning of the entire intake system on diesel engines (including intake manifolds, EGR and swirl valves). This powerful cleaner dissolves most gum, lacquer, tar, carbon and other deposits.

BASIC BENEFITS

- Prevention of EGR intake system malfunctions.
- Smoother engine running.
- Increased power.
- Greater fuel economy.
- Reduces both toxic emissions and smoke.

PROPERTIES

- Restored air flow capacity.
- Detonation safe.
- Improved combustion.
- Improved engine reliability.
- Safe for use on cars with Diesel Particle Filter.

APPLICATION

We recommend to apply a treatment at each regular service or in case of obvious symptoms of intake problems. For all types of diesel engines including the latest generation equipped with DPF and catalytic converter. Note: In case of extreme harsh pollution, we recommend to dismantle the intake system and clean manually the first time XENUM specialists recommend also a simultaneous fuel injection cleaning, performed by applying of the Ultimax Diesel Conditioner (REF. 3222350) or of the In&Out Cleaner (REF. 3192015) for DPF equipped engines.

DIRECTIONS FOR USE

Please, read carefully the operating manual included with the XENUM I-FLUX 200 cleaning device. Operating manual is also available on request: info@xenum.com
