

# WELD PRO

## HIGH TEMPERATURE PROTECTION CERAMIC COATING

### DESCRIPTION

WELD PRO is a new generation ceramic dry film protective coating for all MIG/MAG welding processes. In contrast to traditional "anti-spatter" products, which only protect the item you are welding, WELD PRO protects your valuable welding equipment and helps improve your productivity. Just one application of the silicone-free coating will provide exceptional long-term protection that could last an entire eight-hour shift without the need for re-application.

### BASIC BENEFITS

- Easy to use.
- Fast air-drying coating.
- Long lasting.
- Low thermal conductivity.
- Save time and improve productivity = save money.

### PROPERTIES

- High temperature resistance.
- Achieve a cleaner welding process.
- Does not react with metals or air in its intended temperature range.
- Silicone free formula.

### APPLICATION

When applying WELD PRO you will notice the coating is dry within seconds. Once the welding process begins, the coating will harden on the equipment surface. This provides a ceramic shield that repels the spatter immediately, ensuring continuous uninterrupted welding for long periods. Shake well before use.

### TYPICALS

Form:	Aerosol
pH-value:	Not determined.
Melting point/Melting range:	Undetermined.
Boiling point/Boiling range:	-44°C
Flash point:	-97 °C
Flammability (solid, gaseous):	Not applicable.
Ignition temperature:	365°C
Decomposition temperature:	Not determined.
Vapour pressure at 20°C:	4 Bar
Density at 20°C:	0.683 g/cm <sup>3</sup>
Solubility in / Miscibility with water:	Not miscible or difficult to mix.

### PACKAGING

500 ml aerosol (12 x 500 ml carton)
