

CLIMAIR PRO

ACTIVE FOAM AIRCO CLEANER

DESCRIPTION

Contaminated air conditioning and heater/ evaporator cores can cause foul smelling, health threatening mold and mildew deposits. Use XENUM CLIMAIR PRO to remove and neutralize the contaminates that live in air conditioning and heater systems.

BASIC BENEFITS

- Provides fresh clean air.
- Removes musty smells.
- Quick and Easy.

PROPERTIES

- Exterminates bacteria and moulds.
- Forms a protective film on the evaporator.
- Assures a long lasting protection against smells.
- Reduces allergens and contaminates.

APPLICATION

Shake well before use.

Spray the foam onto the condenser from the air conditioner using the adapter.

CLIMAIR PRO comes with a tube that is inserted in the ducting system to reach the evaporator box (very often through the a/c condensation drain tube) where the entire contents of the can is released as a foam. In 15 minutes the foam turns into a liquid and runs back out the condensation drain carrying the contaminates with it, leaving the vehicle with a clean fresh scent.

Leave to act for at least 20 min before operating the fan.

During the cleaning process, make sure the window is open and avoid breathing in the vapour while cleaning.

Check carefully to make sure the condensation water drainage opening is not blocked, in that case remove the dust or pollen filter from the fresh-air intakes.

Always obtain to replace the dust or pollen filter after the treatment.

TYPICALS

Form:	Aerosol
pH-value:	Not determined.
Melting point/Melting range:	Undetermined.
Boiling point/Boiling range:	0 °C
Flash point:	-60 °C
Flammability (solid, gaseous):	Not applicable.
Ignition temperature:	365 °C
Decomposition temperature:	Not determined.
Vapour pressure at 20°C:	23 hPa
Density at 20°C:	0.97 g/cm ³
Solubility in / Miscibility with water:	Not miscible or difficult to mix.

PACKAGING

250 ml aerosol (12 x 250 ml carton)
